1. Short description

Claudio is an easy to use media player made for users interested in listening to audio books, specifically on different devices.

With Claudio you can continue listening where you last left off listening with only a simple click, whether you continue on the same device or on another one.

2. What can you do with Claudio?

- Create books by selecting a folder or multiple files from your device.
- Continue listening from your last listening session, wherever you left off.
- Upload books to the cloud and stream them from different devices (to be implemented in future releases).
- Download books from the cloud and play them offline (to be implemented in future releases).

3. Getting started

To first get started with Claudio you need to download the application and install it on your device, this can be done by going to <http://github.com/MarcusParkkinen/AudioBook/> and downloading the apk from the apk folder within the repository.

When you have installed and started the application you will be met by your *bookshelf*, which is where you later will see all your created books, whether they are stored on the cloud or locally. The first time you come here your bookshelf will be empty.

To add a book, navigate to your bookshelf and click the + icon in the upper left corner. The screen you are met with after this is that of a file navigator which shows you a file tree of all your audio files. Navigate through the files and check the checkbox for the files you wish to add to your new book (note that folders can be clicked). Once done, click "Add book". If you wish to add further books, repeat these steps, otherwise, click the back button on your device to return to your bookshelf.

If you wish to view the tracks of a book, simply click the book's cover art in your bookshelf, and your books' tracks and their length will be displayed.

To start playing a book from your last position, simply click it in your bookshelf.

If you need to get to another position in your book, you can:

1. click one of the tracks in the bookshelf to start from its position,
2. or you can use the playback controls in the *player*, by either using
 - 2.1 the book navigation bar, which is displayed at the top of the player, over the cover art,

2.2 the track navigation bar, which is displayed under the cover art,

2.3 the time picker, which is located to the left of the book's and track's title, or

2.4 the previous track, next track, seek backward or seek forward buttons, located at the bottom of the player.
