

Release Notes

Cloudio

12/10 2012 - Version 0.2

Introduction

This document contains the release notes for Cloudio, an Android audio book player.

Compatibility

May not be compatible with earlier releases.

Improvements

- Update frequency increased making the GUI smoother.

Limitations of the Application

- There are still issues (crashes). See [Known Issues or Bugs](#).
- Audio playback does not stop while receiving a system notification or a call.
- Core functionality such as editing, removing or re-organizing books or tracks does not work.
- There are no user settings.
- The cover art for the file played is always a default picture.

Known bugs and issues

Documented issues:

- The selected track can still get out of bounds and cause crashes.
- The "Book Selected" event is fired twice when a book is pressed.
- Deleting books does not update the bookshelf. Attempting to delete the same book
- When seeking, the sound cracks slightly.
- The play button is larger than the pause button and has a different appearance.
- The timer is jumpy.
- Sometimes when adding a book quickly the user will be sent to the home screen.

Bug fixes

- [Crash bugs]
- Audio keeps playing when the book is on its last track and nextTrack is pressed.
- Selecting tracks in the expanded books does not set the track index correctly and does not restart the player.
- Track title is null after the first track.
- Using the book seek bar when the book is finished causes crash.
- Trying to expand book that has finished playing results in crash.
- Elapsed time does not reach duration.
- The pause button is off-synch and toggles even when the player does not change its state.
- The application is still running when pressing the back key from the fragments.
- Restarting the program while in bookshelf UI causes double mediaplayer.
- Trying to add a new book crashes the application.
- Unable to replay finished books.

Other changes
