## Scrum tabell - Sprint 2 log

Play an audio file imported from the file system 7  7.1 Fredrik FileBrowser Create file browser UI.  Android activity that provides a graphical representation of a provided file tree. Also includes functionality to select any number of files present in the tree.  60 Day an audio file tree. Also includes functionality to select any number of files present in the tree.  7.1 Aki Player Create Player UI controls  7.2 Aki Player Extend PlayerController to more functionality than to play one audio file  8.1 Marcus Bookmark Implement save functionality of model object tree. Upon restarting the application, the model module should be restored.  8.1 Marcus Bookmark Tag Contains time and a track index.  7.2 Continue playing audio while performing other tasks  7.3 Exemplayed from the file system design  7.4 Aki Player Implement design and track index.  7.5 Exemplayed from the file system design  7.6 Continue playing audio while performing other tasks  7.7 Aki Player Implemented by system design  7.8 Exemplayed from the file system design  7.9 Aki Player Implement graphical UI components that display information about the book/track being played.  7.0 Create Player UI Contains time and a track index.  7.0 Displayed the file spresentiation of the audio player. Includes played file tree. Also includes unctionality to ended to controls (and duration and title.).  7.0 Addio flow control methods and classes.  7.0 Displayed from the file spresentiation of the audio player. Includes played file tree. Also includes file tree. Also includes unctionality to ended to controls (and duration and title.).  7.0 Aki Player Implement graphical UI components that display information about the book/track being played.  7.1 Aki Player Implement graphical UI components (drawable)	User Story	ID	Responsibility	Branch	Implementation desc.	Notes	Est. Cost	Status
system 7  7.1 Fredrik FileBrowser Create file browser UI.  Manipulate the flow of the audio file being played by using playback controls  7.1 Aki Player Create Player UI Extend PlayerController to more functionality than to play one audio file where the user left off  6.1 Marcus Bookmark Mere the user left off  6.2 Aki Tag Contains time and a track index.  10 Continue playing audio while performing other tasks  12 Aki Harcus Development Implemented by system design  14 Implement graphical UI components that display information about ta track being played (metadata)  14. Aki Player Create File browser UI.  Android activity that provides a graphical representation of a provided file tree. Also includes functionality to select any number of files present in the tree.  Graphical representation of the audio player. Includes playback controls (and duration and title.)  40 DD  Addio flow control methods and classes.  70 DD  The application should save the model tree when Pause is clicked or when switching to another book. The application should also attempt to save when onDestroy is called on AudioBookActivity.  10 DD								
Android activity that provides a graphical representation of a provided file tree. Also includes duriton and title.)  7.1 Aki Player Create Player UI Create Player UI Extend Player Controller to more functionality than to play one audio file  7.2 Aki Player than to play one audio file  8.1 Marcus Bookmark model module should be restored.  8.2 Aki Tag Contains time and a track index.  10 Development Implemented by system design  10 Development graphical UI components that display information about ta track being played (metadata)  11.
