DEFINITION OF DONE

For a feature to be considered done, the following criteria must
be fulfilled:

- The code must be in working order and without bugs or issues.
- The code compiles and builds without errors or warnings.
- All requirements of the feature must be implemented.
- At least 40% of the source lines of code must be comments.
  This includes Javadoc.
- Public classes, fields and methods must be documented.
- The code is easy to follow, and it is written and formatted
  according to the guidelines and conventions of Java or
  Android.
- The design is kept or improved and the structure is
  sufficient.
- JUnit tests pass and the code coverage is at least 50%. These
  tests should be comprehensive by testing all possible
  outcomes.
- Relevant documentation (if any) must be included and up-to-
  date.
- The code must be located in the master branch of the
  repository.
- The code is peer-reviewed (during a code review session or
  otherwise) by at least one other team member.
